

From ACUTRONIC to Eurocopter's Tiger

The ACUTRONIC two-axis model DC2295-VA is designed to accommodate periscopes and optical collimators. Its unique configuration, with decoupled axes, enables the use of one single system instead of two separate motion platforms for each optical device. This solution was chosen by SAGEM DS in Montluçon, France.

SAGEM DS, a company of the SAFRAN Group, supplies the Australian, French and Spanish Army with the Strix sight on Eurocopter's Tiger helicopter. STRIX systems are mounted on the roof of helicopters to enable observation, tracking and firing control required by anti-tank and antihelicopter combat helicopters.
