

From ACUTRONIC to SEGWAY® HT

The ACUTRONIC Two Axis model AC2267 is often used to calibrate MEMS sensors. This system can be loaded with multiple sensors for economical test in a production environment, as for example at BAE Systems in Plymouth, UK.

BAE Systems, a company engaged in defence and aerospace systems, provide the Segway® Human Transporter with its unique ability to balance, using new silicon gyroscopes. These gyroscopes won a Queen's Award for Innovation in April 2003.

ACUTRONIC
